

The D3o material is soft and light, but when it hit something, or when it is stressed, it has this unique molecular bond within it that effectively locks together and absorbs a significant amount of the impact energy or stress.

This considerably improves the comfort and also enable the dancer to improve its foot work.

You will not need to add any other toe protections as the D3o covers all the inside shoe.

Sound Roll Bar

The Sound Roll bar is a little piece of D3o material mechanically positioned in the front of the platform which absorb the impact of the Pointe.

This limits the noise of your Pointe shoe.

Sound Roll Bar

DuoSole

Outsole construction that offers lightweight flexibility.

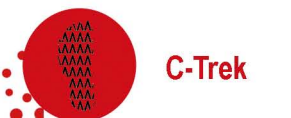

Platform Web

Provide lightweight torsional platform stability

Dura Lining

A blown lining material with high abrasion-resistant qualities for added durability, combined with a comfortable, cushioned movement

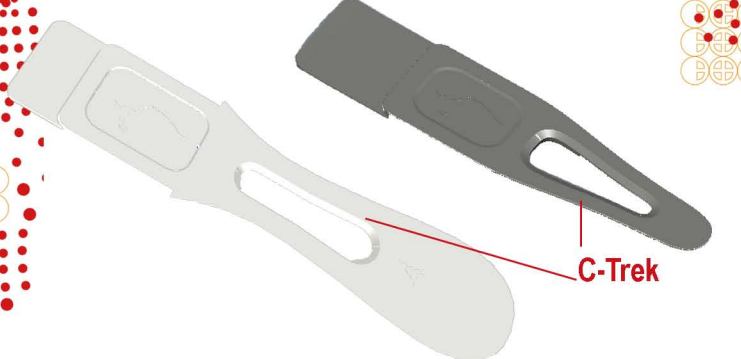

C-Trek

The C-Trek is a proprietary design by Capulet which offers a shank construction specific to the size, width, length and strenght of the dancer..

The Shank has a Multi-directional tread which provide maximum traction and contact, but it also supports the two longitudinal axes.

It comes in:
 - 3 different strenghs.
 - 3 different sizes.

Fitting Tips

In store

Rule of thumb for shoes: if they hurt in the store, don't buy them.

Your left and right foot may differ by as much as a full size. Measure both and fit the larger foot.

Give your feet time to adjust to the new shoes.

The midfoot – the area under your arch and over the instep – should fit snug and not tight.

Pre store

Women's feet may become a half size larger or more during and after p-m.

Specific shoes are designed to enhance performance for specific foot.

Feet swell during the day, try on shoes later in the day when your feet are largest.

Bring your old Pointe shoes to the store – tread areas and stress wear will help guide you to the next selection

DMT Evolution Pointe shoes

www.capuletworld.com

Capulet has developed the DMT evolution Pointe shoe, to enable the dancers to drastically enhance their performances. The DMT will change the way you feel and think about dancing on Pointe.

From the first moment you fit in your new pointe shoes, you can expect superior performance and comfort. You will not need to break in your new Pointe, as it is already ready to support your longitudinal arches and transverse arch and follow/support each of their movements.

Our shanks (C-Trek™) are specially designed to allow your foot to roll but also to support you on pointe with a multidirectional configuration.

The Internal Support System (ISS™) and Impact Guidance system (IGS™) allows the athletes foot to perform in a more natural manner, using an intelligent material (D3o) reacting automatically to the movements of the foot and stress of the muscles, enabling a maximum flexibility and minimum limitation.

Capulet Internal Support system I.S.S

The I.S.S is a specifically designed vamp construction specific to the size, width and foot ball.

The right fit start with the right shape. At Capulet we have developped 27 different foot models to design our shoes around. Each last is crafted to reflect different foot types, users and activities. Capulet shoes come in a wide range of widths to ensure the right fit for the performance you demand.

The results is a complete performance and size profile for a complete line up of superior shoes.

We call it the 360 fit.

Biomorphic

The Biomorphic technology is incorporated into the vamp where the areas of highest deformation are found.

The vamp is structured in a way that enable the foot to work. It follows and support the movements. This ensure a better fit, improve comfort, less risk of injuries and enhance performance.

The material used is no longer a paste, but it is made of Hytrel which will never crack or degrade like the traditional paste.

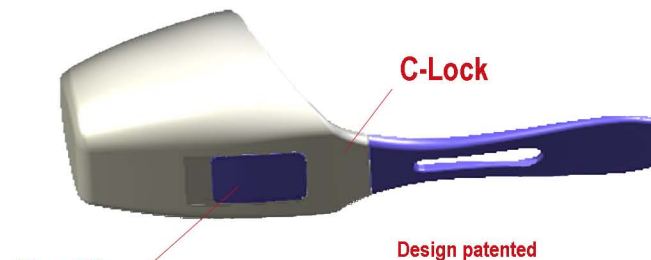

DuoMax

The DuoMax is a proprietary Capulet system that consists of two density midsole materials and designed to provide a smooth over-pronation control on the ball of the foot.

This allows the Pointe shoe shank to follow every movement of the foot at the level of the Transverse Arche, up or down.

Design patented

Duo-Max

C-Lock

The C-Lock is a proprietary Capulet system that consist of 2 mid soles locking and providing smooth support to the metatarsals on Pointes.

It will provide flexibility upward (en Demi Pointe) and strenght downward (en Pointe) thanks to the lock attached to the vamp.

Design patented

Angel

Design patented

The Angel is made of D3o Intelligent molecules reacting to the stress of the movement and the dancers' efforts. It covers the vamp, platform and midsole to enable specific functions and positions.
